EXPERIENCE

Senior Software Engineer II • GeekyAnts, Bengaluru | Oct 2021 – Present

Full-stack engineer leading frontend initiatives across React Native, Next.js, and native Swift for clients ranging from US restaurant chains to Indian super-apps. Selected projects below.

MyJobDrop — Belgian Job Portal Feb 2026 – Present

- Full-stack engineer on a 3-person team (2 devs + designer) working directly with the client to revamp a multi-million-dollar job portal currently serving **6,000+ users and 2,000+ companies**.
- Drove infrastructure migration from Firebase → Supabase → AWS for scalability; designed VPC topology with private subnets behind an Internet Gateway, deployed via **Terraform IaC**, with ECS, SQS, RDS Postgres, and Redis caching.
- Building the React Native and Flutter mobile apps, Next.js web, and FastAPI backend end-to-end — including API design and core business logic.

Talenzap — Skills Contest App (India) 2026

- Joined as senior engineer in a team of 6 to harden a video-first social app (Instagram-style upload + feed) for production launch; now live with **1,000+ users**.
- Solved the critical pre-launch offline video caching problem by authoring [expo-video-cache](#), an open-source npm package now used in production at Talenzap (**100+ weekly downloads**).
- Owned performance optimization and resolved P0 issues blocking release.

Trovey — Australian Travel & Itinerary App 2025 – 2026

- Tech lead on architecture across a **7+ engineer team** building a cross-platform travel-planning product (mobile + admin web + NestJS backend); led decisions on OTA updates, background tasks, localization, and theming on Expo SDK 54.

Jio Design System — Powering 10+ Apps, 500M+ Downloads 2025

- Core contributor to the design system used across MyJio, JioCloud, JioPay, and other Jio apps reaching **500M+ downloads**.
- Reduced iOS pod size by **50%** by auditing and removing redundant linkers, unused dependencies, and dead files — directly improving install size and CI build times for every downstream app.
- Cut UI bug reports by **~40%** through stricter token usage and component-level fixes.

Alarmas — Fleet Tracking App (Paraguay), Tech Lead 2025 · 5 months

- Led a **5-person team** (3 frontend, 1 QA, 1 backend) end-to-end: team formation, sprint planning, code review, and personally architecting the hardest module — real-time map clustering.
- Implemented a **C++ JSI clustering engine** that renders 1,000+ concurrent devices on the map at **60 FPS on both iOS and Android**, supporting **50,000+ users with a zero-crash rate**. Case study: monisankarnath.dev/case-studies/react-native-gps-map-scaling-performance.
- Owned the React Native (Expo) frontend and backend top to bottom and delivered the project on schedule.

Darden Restaurants — 11-Brand Nx Monorepo (\$11B Enterprise) 2022 – 2024

- Led the **reservation module** and **Microsoft (MSAL) authentication module** for an Nx monorepo serving 11 US restaurant brands including Olive Garden, LongHorn Steakhouse, Bahama Breeze, and Ruth's Chris Steak House — shared React Native mobile app and React + Next.js web apps.

- Cut auth-related defects by **~40%** by re-architecting the MSAL integration and standardizing flows across mobile and web.
- Contributed extensively to location search (owning most map features), menu, order tracking, curbside, and waitlist modules.

Figma → HTML Email Plugin (Internal Tool) 2024 · 3 months

- Built a Figma plugin (TypeScript) in a team of 3 that converts Figma designs into production-ready, SendGrid-compatible email templates.
- Designed and implemented the **recursive node-traversal algorithm** that handles the hardest case — absolute positioning with overlapping nodes — reaching **95%+ visual accuracy** as verified by QA. Adopted internally with a public release planned.

iOS In-App Purchase SDK — Synchronoss 2024 · 3–4 months

- Owned the Swift native side of an in-house IAP SDK on a 6-person cross-platform team; SDK is now integrated across all of the client's internal iOS apps.
- Built on Swift + StoreKit 2 with **85%+ XCTest coverage** and an Xcode Cloud pipeline that auto-publishes the demo app to TestFlight on every release.
- Published to Swift Package Index: swiftpackageindex.com/nathMonisankar/IOS-IAP-store.

OPEN SOURCE

expo-video-cache — Author and maintainer. Efficient video caching for Expo / React Native apps; **100+ weekly npm downloads**, shipped in production. npmjs.com/package/expo-video-cache

SKILLS

Languages TypeScript, Swift, Java, Python

Mobile React Native, Expo, Swift, SwiftUI, Flutter

Web React, Next.js

Backend & Infra Node.js, NestJS, FastAPI, PostgreSQL, Redis, AWS (ECS, SQS, RDS, VPC), Terraform, Firebase, Supabase

Tools Nx, Figma, Xcode Cloud, Azure DevOps, JSI / C++ interop

EARLIER EXPERIENCE

Software Engineer · Wipro · *Oracle DBMS, SQL / PL-SQL* 2020 – 2021

AWARDS & EDUCATION

Tech Innovator Award, GeekyAnts — geospatial map performance optimization (Alarmas).

Impact Contributor Award, GeekyAnts — open-source *expo-video-cache*.

B.Tech, Electronics & Communication Engineering · CGPA 8.33/2020
